

Frontend Responsibilities Documentation

Project: AI Blood Donation Management System

1. Introduction

As a frontend developer of the AI Blood Donation Management System, my responsibility is to design and develop the user interface (UI) and user experience (UX) of the system. The frontend part will allow users to interact with the system easily through web pages, forms, buttons, dashboards, and navigation components.

2. Main Responsibilities

2.1 User Interface (UI) Design

Design the visual layout of the application including:

- Homepage
- Login page
- Registration page
- Dashboard
- Blood request page
- Donor search page
- AI chatbot interface

2.2 Frontend Page Development

Create and manage frontend pages using React.js.

Planned Pages:

- Home Page
- Login Page
- Register Page
- User Dashboard
- Admin Dashboard
- Search Donor Page
- Emergency Request Page
- AI Chatbot Page

2.3 Navigation System

Design and implement:

- Navbar
- Sidebar (if needed)
- Footer
- Page routing/navigation

2.4 Form Design

Develop forms for:

- User registration
- Login
- Blood request submission

- Profile update
- Donor availability update

2.5 Responsive Design

Ensure the system works properly on:

- Mobile devices
- Tablets
- Desktop devices

2.6 API Integration (Frontend Side)

Connect frontend pages with backend APIs for:

- Login and authentication
- User profile data
- Donor search results
- Blood request data
- AI chatbot responses

2.7 Dashboard Interface

Design user dashboards to display:

- Donation history
- Notifications
- Emergency requests
- User profile information

2.8 AI Feature Interface

Create frontend UI for AI-based features:

- AI chatbot
- Smart donor recommendation display
- Emergency alert notifications

3. Tools and Technologies

Frontend Framework:

- React.js

Design Tools:

- Figma
- Draw.io

Styling:

- CSS
- Tailwind CSS (optional)

Version Control:

- GitHub

4. Frontend Diagrams and Design Tasks

The frontend developer is also responsible for:

- UI mockup design
- Use Case Diagram support
- Frontend workflow planning
- User interaction planning

5. Expected Outcome

The frontend system should provide:

- Easy user interaction
- Clean and modern design
- Fast and responsive user experience
- User-friendly navigation
- Attractive interface for donors, patients, and hospitals
